Providing Acoustic Comfort for Occupants – Deemed to Satisfy Criteria

The project has been designed to improve the acoustic comfort of building occupants by addressing the following areas: [Please select the applicable acoustic features of the building]

Credit Criteria	Description	Points available	Points claimed
1 Internal noise levels	Internal ambient noise levels in the nominated area are suitable and relevant to the activity type in the room. This includes all sound generated by the building systems and the external noise ingress.	1	<input type="checkbox"/>

1 Internal noise levels

For purposes of this credit criterion, the nominated area includes all primary and secondary spaces and living and sleeping areas in residential units. A space can be excluded if the standard recommends that specialist advice be sought, such as in a theatre.

One point [has/has not] been achieved as the internal ambient sound levels in the nominated area are to be no more than 5dB(A) above or below the “satisfactory” sound levels provided in Table 1 of AS/NZS 2107:

[Describe all relevant internal and external noise sources, relevant design features and measured noise levels in all relevant spaces. Documents to support that the project meets credit criteria could include a report by qualified acoustic consultant and extracts from the commissioning report detailing relevant measured noise levels and target noise levels]

[Please insert hyperlinks to documents which support this claim]

Therefore, as demonstrated in section 1, this project is eligible to achieve [1] point for demonstrating that the internal ambient noise are suitable and relevant for the activity type in the nominated areas.

(The report is to be on the letterhead of the company preparing the report)

Date issued: July 2013
