Notes:

Storage units are assessed across three environmental impact categories, as follows:

- 'Resource Utilisation' which assesses the storage unit's:
 - Eco Preferred Content (EC); and
 - Durability (DU).
- 'Management' which assesses:
 - the storage unit manufacturer's Environmental Management System (EMS); and
 - Product Stewardship (PS).
- 'Reusability' which assesses whether the storage unit is:
 - Designed for Disassembly (DD).

Each of the environmental impact categories are weighted equally:

Total Score = EC + DU + EMS + PS + DD.

Maximum Score = 10 + 10 + 10 + 10 + 10

The number of points determined by the Mat-6 Storage Calculator are based on a total score out of 50 for each storage unit type and

then weighted according to the number of that storage unit type as a fraction of total tables.

The final score is provided in the Materials Calculators Output Sheet.
